SUMMARY

Computer Engineering undergraduate with strong fundamentals in Data Structures, OOP, and System Design. Co-developed a cybersecurity network simulator with automated risk scoring across a **12-device** network topology, drawing **23** GitHub stars, and built a BigQuery + Looker Studio pipeline analyzing **15,987+** records at **99.9%** clean data yield. Curated computer vision training data for Deccan AI's Project Bumblebee, and analyzed governance data as a Shaheed Bhagat Singh Fellow with the Government of Punjab. Founded a **1,000+** member STEM community and organized GNDU's first national-level hackathon, securing **₹10+ lakh** in sponsorships.

EDUCATION

Bachelor of Technology in Computer Science & Engineering
Guru Nanak Dev University, Amritsar | Year of Graduation - 2027

SKILLS

Programming Languages: SQL, Python, C++, JavaScript
AI/ML & Computer Vision: Machine Learning (Random Forest, Regression, Classification), Federated Learning, Edge & Fog Computing, Generative AI Fundamentals (LLMs, RAG)
Core Computer Science: Data Structures & Algorithms, OOPs, System Design, Operating Systems, Computer Networks, Git/GitHub
Cybersecurity & Risk: Risk Scoring & Assessment, Network Security Simulation, Vulnerability Analysis
Data Analytics & Visualization: Big Query, Looker Studio, Data Cleaning & Validation
Professional Skills: Team Leadership, Stakeholder Management, Problem-Solving, Business Communication

PROJECTS

VulnNet Analyzer | [GitHub link](#)

- Designed core OOP architecture (encapsulation, composition, RAII) for a C++-based cybersecurity network simulation engine.
- Collaborated with a 2-person team via GitHub pull requests and code review, incorporating peer feedback on architecture and API design.
- Built a **12-device** demo network topology with real-time risk scoring and automated security reporting, drawing **23** GitHub stars and 2 forks from the developer community.

US-UK YouTube Market Analytics Dashboard | [GitHub link](#)

- Engineered a BigQuery + Looker Studio pipeline, cleaning **15,987** trending video records at a **99.9%** clean data yield across two markets.
- Found the UK's top category (Music) drove **46%** higher total views than the US's leading category (Entertainment).
- Independently validated every metric before delivery, catching and correcting a **SUM-vs-AVERAGE** aggregation error that would have misrepresented category-level sentiment.

INTERNSHIP EXPERIENCE

AI Intern, Deccan AI Experts

Jun 2026 – Present

- Generated and curated ~**50** videos of diverse household task demonstrations to build a computer vision dataset for human activity recognition.
- Supported model training pipelines aimed at teaching ML systems to recognize and automate household tasks from curated video data.

Sector In-charge, SBS Fellowship, Govt.of Punjab

Jun 2026 – Aug 2026

- Monitored progress and managed process risk for a public-sector electoral governance initiative (**Special Intensive Revision**) across a **1.6M** voter constituency, identifying migration-linked data discrepancies and keeping stakeholders informed of outcomes.
- Maintained constituency-level data integrity and delivered actionable reporting to government and elected authorities to guide compliance and process improvements.

LEADERSHIP & RESEARCH

Founder, CosmoGen Students Society, GNDU

Sept 2023 – Present

- Founded GNDU's first STEM-focused student society from a team of 5, scaling it into a university-wide, all-STEM community of **1,000+** active members in under 2 years.
- Organized **CosmoHacks'25** — GNDU's first national-level hackathon, along with a university-level hackathon (**CodeWars'23**), multiple coding and STEM competitions, and an **Apple SDE tech talk**, securing **₹10+ lakh** in corporate sponsorships to fund these initiatives.

Research Assistant, Precision Agriculture Data Analysis, GNDU

Apr 2026 – Present

- Collaborating with an Assistant Professor on a research analyzing **3,000+** soil datasets (**composition, moisture, nutrient levels**) using regression and classification models to recommend optimal crops per soil profile.
- Exploring federated learning and edge computing approaches for real-time, distributed soil-sensor data processing.

ACHIEVEMENTS / ACTIVITIES

- Secured **AIR 35** in the **ISRO** Space Competition (2022) for proposing radiation-proof agricultural domes to grow food on Mars for long-term human-controlled space missions.
- Certifications:** SQL (Intermediate), HackerRank | **Google AI Essentials**, Google
- Solved **150+** problems on LeetCode, strengthening proficiency in data structures, algorithms, and problem-solving under time constraints.
- Student Ambassador at **Google Gemini** and Innovation Mission Punjab (**IMPunjab**).
